

## EMPOWERING CONTROL WITH FLEXIBLE, SECURE, AND REMOTE CAPABILITIES

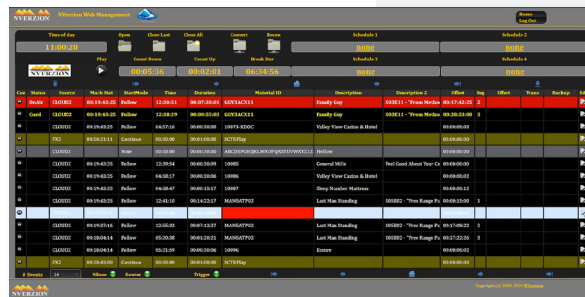

NVERZION understands the evolving demands of master control operations, necessitating flexible and swift solutions. Our core product solutions excel in providing robust on-premise support, while our innovative web-based platform enhances remote system control capabilities, marking a significant advancement in operational efficiency.

Our web-based systems have revolutionized operations, freeing you from the constraints of dedicated workstations and installed software. With our intuitive web GUI, you can control your systems from anywhere with internet access.

To ensure security, we offer advanced features that guarantee only authorized personnel can access your systems, providing both flexibility and peace of mind.

NVERZION's Browser solution ensures top-notch security with secured logins, allowing access only to those with specific credentials. It offers multiple permission levels, enabling master control operators to manage playlists without accessing sensitive system settings. Only users with admin rights can add additional users or modify configurations. This solution combines the flexibility of remote system control with stringent security measures, ensuring your operations remain both efficient and secure.

### Features:

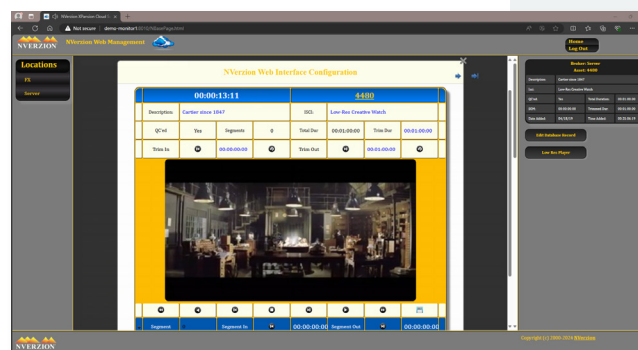

- Robust On-Premise and Remote System Support
- Intuitive Web GUI for Anywhere Access
- Secure Login with Multiple Permission Levels
- Seamless Timeline View for Event Monitoring

### Benefits:

- Enhanced operational efficiency with flexible, swift system control solutions.
- Revolutionize workflows by eliminating dedicated workstation constraints.
- Ensure secure, authorized access with advanced login features.
- Effortlessly monitor and edit events with seamless timeline integration.

NVERZION has also introduced a new timeline view, enabling users to effortlessly monitor multiple channels at a high level or zoom into specific events on any given channel. This feature integrates seamlessly with our NControl playlist, allowing users to edit events directly from the timeline view without needing to learn a new interface. For in-depth control, simply select a channel to access its full list of events. This innovation enhances efficiency and user experience, providing comprehensive control with ease.

On the acquisition and preparation front, NVERZION's Hybrid solution centralizes content acquisition and prep, offering unmatched flexibility. Whether on-premise or via our web-based platform, the system adapts seamlessly to your evolving operational needs. This ensures smooth transitions between on-site and remote control, providing you with the confidence and capability to manage your operations from anywhere, anytime.

## Expanded Capabilities with NVERZION Tools

**NCompass** facilitates efficient media transfers to the video server, whether traditional or syndicated. The NFinity Video Server serves as the primary interface, displaying upcoming commands and available devices. NCompass implements rules approximately every 15 minutes, with the flexibility to modify this interval by selecting "Do Rules Now." Command updates are sent instantly to the NCompass module for immediate execution, ensuring seamless media transfer management.

**NTime** empowers operators with time-driven event scheduling, allowing for unprecedented freedom and efficiency. By integrating with other NVERZION tools, NTime enables the creation, editing, and execution of video events with precision. Its 24/7 cyclical scheduling accommodates long-term planning, controlling devices, routers, satellite receivers, and more—all from an intuitive interface.

**NGest** optimizes content workflows by managing material transfers between devices with ease. From setting sources and destinations to encoding rates, NGest simplifies operations via its intuitive interface. Optional features, such as machine control integration and multiple destination configurations, further enhance its utility, making NGest an indispensable tool for efficient media management.

**NControl Monitor** provides a graphical display of up to six schedules, offering real-time visibility into operational workflows. With its intuitive dashboard, users can track on-air schedules, view upcoming events, and identify issues through clear visual indicators. Particularly valuable for centralcasting, NControl Monitor ensures streamlined playlist management, enhancing overall efficiency and control.
